

# Siva

## Engage-to-Earn

### What

**Users and streamers earn crypto for interacting.**

Community members get rewarded with Engagement Points ( $\mu$ SIVA) for writing messages or adding reactions. Users can withdraw  $\mu$ SIVA points into cryptocurrencies, tokens, and NFTs.

### Why

**To make Web3 projects a success.**

1. Scientific studies have shown a 1:1 relationship between community engagements and the success of a project, especially in Web3
2. Close the gap between the offline time of streamers and their next stream
3. Onboard new users and provide more utility for existing users
4. Provide new ways for token and NFT distribution

### How

**Earn crypto in Discord - onboard more users - spread the word.**

Community members earn our partners tokens while chatting in all Discord servers Siva is invited to and can spend them after withdrawal directly in their ecosystems. Users must hold a Mintpass NFT, which is required to withdraw  $\mu$ SIVA and acts as an access card.

### Where

**Currently on Discord - soon on Telegram.**

Sivas API approach allows for fast implementations in other clients and services that support the measurement of engagements. Telegram is the next supported client on our roadmap.

### Who

**Siva E2E Protocol by Ew0x Labs.**

The Siva team is fully doxxed, and our E2E Ecosystem is 100% transparent, decentralized, and non-custodial.
